Software Engineer | Python • Data Structures & Algorithms • REST APIs • Cloud (AWS) • Full-Stack Development

EDUCATION

SR University

Warangal, Telangana

Bachelor of Technology in Computer Science Engineering | CGPA: **9.83/10**

2024 – 2028

Relevant Coursework: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Artificial Intelligence

PROJECTS

TrackBack – Lost & Found Platform for Public Transport | *React, Node.js, Express, MongoDB, JWT*

- Architected a full-stack MERN platform for reporting, searching, and claiming lost or found items across bus, train, and metro systems, built to a formal problem-statement spec with a REST API spanning auth, reports, claims, and notifications.
- Designed a rule-based auto-matching engine that scores lost/found reports by category, location, and keyword overlap, automatically linking likely pairs and notifying both parties; built an admin console for claim verification, report-status control, and live dashboard statistics.

AI Bus Tracker – SR University | *Node.js, Express, JWT, REST APIs*

- Architected a real-time tracking system with a Node.js/Express REST API, designing concurrency-safe seat-reservation logic to prevent race conditions and double-booking under simultaneous requests.
- Implemented role-based authentication (JWT + bcrypt-hashed passwords) and a modular route-layer architecture (auth, bus, reservation) for maintainability; built a live schematic map with animated tracking and autocomplete search across 20+ stops.

Tourism Growth Storytelling Dashboard | *Python, Dash, Plotly, Pandas*

- Built an interactive Dash/Plotly dashboard analyzing global tourism arrivals and COVID-19 recovery (2015–2020) across 200+ countries, featuring an animated choropleth map, country/region trend lines, and a top-10 recovery leaderboard.
- Implemented live cross-filtering (year, region, country) that recomputes KPI cards and a plain-language narrative summary in real time; cleaned and validated the underlying dataset via a dedicated pandas EDA notebook, with optional Prophet-based forecasting.

MediCare – Hospital Management System | *Python, Tkinter (tkbootstrap), SQLite*

- Built a full-featured desktop HMS with a Tkinter/tkbootstrap GUI and SQLite backend, implementing CRUD modules for patients, doctors, appointments, billing, and medicine inventory with auto-generated IDs and foreign-key integrity.
- Implemented SHA-256 authenticated login, Matplotlib-based revenue analytics on the dashboard, and one-click PDF bill generation via ReportLab; added CSV export, low-stock alerts, and persistent light/dark theming.

TECHNICAL SKILLS

Core CS: Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis, DBMS, Operating Systems, Computer Networks

Languages: Python, JavaScript (ES6+), SQL, C

Backend: Node.js, Express.js, REST API Design

Data & Visualization: Pandas, NumPy, Plotly, Dash, Tableau

Databases: MongoDB, Oracle SQL, MySQL (familiar), SQLite

Frontend: HTML5, CSS3, React, Responsive Design, DOM Manipulation

Tools & Platforms: Git, GitHub, VS Code, AWS (EC2, S3, Cloud Foundations, Cloud Developing)

Other: Agile Development, Code Review Practices, Cross-functional Collaboration

CERTIFICATIONS

- AWS Academy Graduate – Cloud Developing | AWS Cloud Foundations | Cisco CCNA
- CS205: Building with AI – Saylor University | Dynamic Programming Camp – AlgoUniversity | Python – HackerRank

LEADERSHIP & ACHIEVEMENTS

- Selected as **Batch Representative for Academic Year 2025–26**; rated the top-performing representative in the batch for coordinating between students and faculty and resolving academic concerns.
- Awarded **Vice Chancellor's List** for academic excellence (CGPA: 9.83/10) at SR University.
- Participated in **4 consecutive semester Night Hackathons**, collaborating on prototype solutions for real-world web and engineering challenges.
- Attended AI/ML workshops covering **Generative AI, LLMs, and applied ML**; completed Dynamic Programming Camp at AlgoUniversity.
